

Shipping made easy!

THERMO KEEPER® PIE AND CAKE SHIPPER

ThermoKeeper® Pie & Cake Shippers are “environmentally green” insulating liners designed to create a temperature-controlled shipping system that is totally biodegradable, thermally sound, and fit snugly into a protective corrugated outer box.

The inner and outer surface of the ThermoKeeper liner consists of a biodegradable film that is perforated to allow unwanted moisture to migrate away from the payload area and be absorbed into the inner pad. Sandwiched between the films and sealed on all sides, is a proprietary, biodegradable, super insulating pad made from recycled, purified, organic textile fibers. Super-absorbent powders (for absorption of spills or condensation), have been bonded to the fibers during the thermal sterilization process in manufacturing.

This unique system combined with the strategic placement of the refrigerant, makes the ThermoKeeper Pie and Cake Shipper an ideal thermal protective shipping system not only for Pies and Cakes; but also, other temperature sensitive food products.

What sets our ThermoKeeper Pie and Cake Shipper apart from other foam type shipping containers is:

- **PROTECTION** - One and a half inches of soft, organic-fiber insulation provides superior cushioning on all sides to prevent damage to the pie or cake during the rigors of shipping.
- **TEMPERATURE CONTROL** - The strategic placement of our phase-change refrigerant, located under the pie or cake, always remains in direct contact with the bottom of the pie or cake plate for superior cooling yet does not allow damage if the pie or cake inadvertently undergoes some thawing because of unforeseen delays in shipping or pick-up.
- **STORAGE** - ThermoKeeper Pie & Cake Shippers are shipped flat to you, for considerable savings on freight; and also require far less storage space, for additional savings and convenience.
- **DAMAGE** - ThermoKeeper Pie & Cake Shippers experience zero damage or loss either during shipment or in storage, caused from cracking, chipping, splitting or other damage that can occur with foam boxes.
- **SHIPPING** - Superior insulation qualities and extended duration allows you to ship using 2nd day freight, thus avoiding the expense of priority, overnight costs.
